Conductor : High Conductivity, bare annealed copper flexible conductor.

Sheath : Double Sheathed with a specially developed thermoplastic Elastomeric (TPR / TPE) Orange / Black Coloured

Voltage Drop :

When total cable lengths in excess of 15 mtrs. are involved, it may be necessary to use cables of larger cross section to ensure that the voltage drop is not excessive and welding currents are maintained at adequate levels.

Applications :

Welding: Designed for the secondary (high current) connection to automatic or hand - held metal arc welding electrodes. It is suitable for flexible use under rugged conditions. On assembly lines and conveyor systems, in machine tool and automatically operated line and spot welding machines. Power: Earthings / return leads, power feeds to electrolytic plating process, busbar connection, transformers, generators, aircraft servicing equipments etc.

Current Ratings :

The maximum current ratings of flexible welding cables for different duty cycles are based on an ambient air temperature of 20 Deg. C to 25 Deg C and a maximum conductor temperature of 90 Deg. C. The percentages duty cycles given in the table are based on a cycle time of 5 minutes.

The typical duty cycles for various welding processes and applications are as follows:

Automobile welding : ----- up to 100%
Semi-automatic welding : ----- 30% to 85%
Manual welding : ----- 0% to 60%
Very intermittent or Occasional Welding : ----- up to 20%
